

# **COMP 584 – Email Campaign Test Report**

Name: Farshad Azam  
Assignment: HW4 Project Email Campaign

## **Email Clients Tested**

- Gmail (web version)
- Gmail mobile view
- Browser preview through GitHub Pages

## **What Worked**

- Images loaded correctly using my hosted GitHub link.
- The two-column and three-column layouts stacked correctly on mobile.
- Buttons and links directed to the correct pages.
- Hover effects worked on desktop.
- The animation showed in browser preview.
- The radio button tabs switched content in supported clients.

## **What Did Not Work / Limitations**

- Some email clients limit CSS animations.
- Outlook may not fully support the radio button interaction.
- Hover effects do not work on mobile devices.

## **Conclusion**

Overall, the email met all the assignment requirements. It is responsive, includes animation, and uses interactive elements. In clients that do not support advanced CSS, the layout still displays correctly.
